Professional Summary Full Stack Developer with 5 years + of experience specializing in the MEVN/MERN stack, real-time architectures, and integrating AI models and mapping data libraries. Architecting RAG (Retrieval-Augmented Generation) pipelines and autonomous workflows. Highly adaptable and thrive in fast-paced, product-driven environments.

Technical Skills

- **Languages:** JavaScript (ES6+), TypeScript, Node.js, Python (Familiar).
 - **Frontend:** Vue.js, React, Next.js, HTML/CSS/SASS.
 - **Backend & AI:** Express.js, WebSockets, LangChain, OpenAI API, Redis Pub/Sub, Redis Caching, JWT, OAuth.
 - **Databases:** MongoDB, Pinecone, Chroma DB (Vector DB), Supabase
 - **IDE:** Cursor, Gemini Cli, Claude code, Antigravity, VS Code
-

Professional Experience

Full Stack Developer | Edvanta Technologies (Sample Screenshots: <https://bit.ly/486gzU2>)

December 2020 – April 2026

- **Architected a Production RAG Pipeline:** Designed an asynchronous document ingestion flow using **AWS S3**, **LangChain**, and **Pinecone**. Enabled users to contextually query large uploaded documents via **LLM** models. These knowledge bases were user specific graphical documents.
 - **Integrated Generative AI Features:** Upgraded a legacy data-mapping tool by integrating OpenAI, allowing users to dynamically generate entire topical graphs and subtopical information from conversational prompts. Added MCP feature specific tools to query live database and provide enough context.
 - **Prompt Engineered Structured JSON:** Made dynamic prompt library to switch among different prompts and ensures structured JSON output, even in case of complex large data.
 - **Redis Caching(Node.js): Reduced** API response times of large JSON data by **90% (250ms to 20ms)** and minimized **Redis cache** footprint by **98% (2.5MB to 50KB)** by implementing payload compression prior to in-memory caching.
 - **Architected the "ThoughtJumper" UI (Vue.js):** Designed and developed the core application featuring a multi-panel workspace, interactive graph canvas, dynamic node controls, and real-time **RAG**-connected chat widgets. Built **20+** frontend **components** and corresponding **backend endpoints** from scratch.
 - **Developed a Custom Vue.js Chrome Extension:** Engineered a Vue/Webpack-based browser extension with **JWT** authentication to track user time logs and seamlessly capture real-time user inputs from any webpage.
 - **Engineered Job Insights Dashboard:** Built a full-stack analytics feature (**React.js/Node.js**) aggregating and visualizing large-scale US demographic data sourced from the Bureau of Labor Statistics (**BLS**) to enable dynamic market comparisons.
-

PROJECTS

- **Bi-Directional Note Architecture:** Built a dynamic, real-time graph visualization tool for note-linking (similar to Obsidian) using React, Supabase, and the Gemini-Flash-3 model.
 - Click Here: <https://github.com/pkkarn/grapchit-note-studio>
- **Automated Social Media Bot:** Engineered a Discord bot that accepts user prompts, generates images via generative AI, and automatically publishes the content to Instagram using the Instagram Graph API.

EDUCATION

Bachelor of Computer Applications (BCA)

Maharshi Dayanand University - Rohtak

2017 – 2020
